Web Development Essentials

Forms and Grid

Assignment:
Forms with Grid

Objectives

Recreate the mockups to practice creating **HTML Forms** and styling them with **CSS Grid**.

Requirements Checklist

1. GitHub Repository

Create a new repository on your GitHub account named ***forms-with-grid***

As you work on the assignments (through each step or checklist item), make sure to commit and push to the GitHub remote repository, so that when you finish the assignment the GitHub repository will feature the completed work.

Requirements Checklist

2. README File + Credit to Designer

Since this is based on a UI Design someone else made, make sure to include a **README.md** file in your GitHub repository where you give credit to the creators of each design, as shown on each figma file.

If you work in a team for this assignment, make sure to list all the development team members and their responsibilities / contributions in the assignment.

Requirements Checklist

3. Semantic Markup (HTML)

Make sure to apply everything you have learned about HTML to setup the page structure using semantic markup and accessibility in mind.
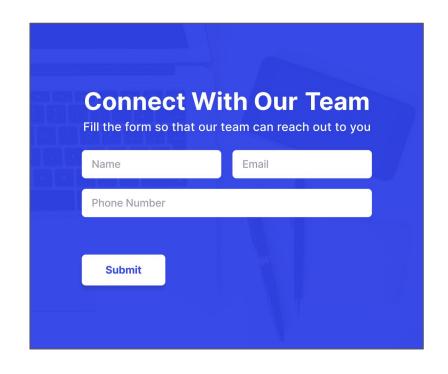

Requirements Checklist

4. Form Mockup 1

Recreate **Contact Form 5** from the provided figma file.

Requirements Checklist

6. CSS

Make sure to apply everything you have learned about CSS to style the page.

However for layout (display property) use only Grid, as this is the focus right now.

Think about which Grid approach to use (implicit, explicit, auto, or named areas) for each element on the mockups.

The teacher may ask you to explain or validate your decisions / choices.

Extra Notes

Non-Responsive

This mockup is for PC/Desktop only, therefore there is no expectation of a mobile-friendly version.

Transitions / Animations

Not required, but you may add transitions and/or animations if you want.

Image Assets

Get image assets from Unsplash, Pexels, and/or Pixabay.
